Summary

Software Engineer with 3+ years building data-intensive systems in Java and Spring Boot. Built backend services and Spark/Elasticsearch pipelines for enterprise-scale data, including AI agents and RAG for natural-language Master Data changes. Built and published Bitvelo, an Android app with 500K+ installs.

Technical Skills

Programming Languages: Java, Kotlin, Scala, Python, SQL, TypeScript, JavaScript

Backend: Spring Boot, Hibernate, Microservices, RESTful APIs, gRPC, Kafka, RabbitMQ, JUnit

AI & Data Processing: Apache Spark, Spring AI, LLM Integration, RAG, Embeddings

Databases: PostgreSQL, MySQL, Elasticsearch, Redis, pgvector

DevOps & Cloud: Docker, Kubernetes, AWS, GCP, CI/CD, Linux, Git

Industry Experience

Software Engineer | Prospecta Software Pvt. Ltd.

Feb 2023 – Present

- Built a Python/Pandas load-sheet transformation service converting **33K+** SAP Fiori Excel records into automated MDO create/update/delete actions, cutting manual processing **from days** to a single upload cycle.
- Built multiple **KAI agents** and backend services for natural-language Master Data changes, covering metadata retrieval, validation, and change-request persistence. Designed a **RAG** layer using embeddings to inject customer-defined rules into prompts, enabling per-client interpretation logic without retraining.
- Extended the User Defined Rule engine with AND/OR and nested condition support, enabling **60%** of custom client rules to be configured without code.
- Developed Task Analytics feature using **Elasticsearch aggregations** to compute and visualize team performance metrics, supporting data-driven operational decisions.
- Designed Hierarchy View feature using recursive **SQL CTE** queries to navigate complex multi-level nested data relationships, improving query speed by **90%** over the legacy implementation.
- Built a data profiling tool using **Apache Spark** to analyze large datasets, identifying duplicates, missing values, and inconsistencies with **99% accuracy**.
- Led development of the **360° View Dashboard** using nested Elasticsearch documents, unifying data quality and operational metrics with changelog tracking and in-place record update capabilities.
- Engineered an Adapter **Microservice** for **real-time** SAP/CPI integration, enforcing data consistency through automated validation and transformation logic.
- Reviewed peer code and contributed to architectural decisions improving system **performance** and **scalability**.

Achievements

Bitvelo - Internet Speed Meter ▶

Built and published an Android app monitoring real-time internet speed through a foreground service and live notification. It tracks per-app data usage with network stats APIs, visualizes trends in interactive charts, and retains 30-day history in secure local storage, optimized for low battery and memory impact.

Highlight: Over **500k+** installs on Google Play Store.

Projects

Zip Connect 🌐

- Built a procedural puzzle game with pathfinding and level editor that lets players create and share custom levels.
- Implemented Firebase Auth and Firestore-backed real-time leaderboards, player stats, and shared levels.

Tech stacks: React, Vite, Tailwind, Firebase

DevTools 📁

- Built and deployed a privacy-first developer toolkit with 9+ browser-based utilities, including JSON formatting, OCR image-to-text, encoding/decoding, and UUID generation, with all processing done client-side.
- Implemented CSV-to-SQL conversion with MySQL, PostgreSQL, and SQLite dialect support, and a gzip converter with partial data recovery.

Education

Bachelor of Computer Applications, Manipal University Jaipur

Feb 2024 - Feb 2027

Full Stack Web Development, Masai School

May 2022 - Jan 2023
